OUTDATED MOD

This mod is not known to work with the latest version of Kerbal Space Program. Proceed with caution.

[Information](#) [Changelog](#) [Stats](#)

The Transfer Window Planner is a plugin to let you visualise planetary transfer efficiency in-game. Using it you can select your planet of Origin and planet of Destination and it will present you with details about the required Delta-V to travel from Origin to Destination.

You access the tool by clicking on the Porkchop icon in either the AppLauncher or Common Toolbar - your choice - then follow the instructions in the main window. Once you have selected a transfer you can use the Copy buttons to copy that text to any other plugin or window.
